

# Relining Conductor-Contact Sheave Channels

## Since 1979

February 2025

### Engineered Sheave Channel Re-Lining Services

Over the past 30 years, Elastomer Specialties has developed a unique process for relining worn power line sheave channels.

Our proven system saves money by removing the old worn channel liner and replacing it with our proprietary engineered coating.

When you ship your sheaves to ESI, either in wire cages or on pallets, that is the way they will be returned. We reline sheave channels in sizes from 5" to 55" diameters on a nationwide basis.

To get pricing call 1-800-786-4244 / 1-918-485-0276 and ask for Darin Emmons or email Darin at: [demmons@elastomer.com](mailto:demmons@elastomer.com)
